Meet Elizabeth and 7-year old Blizzard with Allergies...

By October 2nd, 6 weeks after we began using the NZYMES® Healthy-Skin Products and also changing to the recommended pet food, the redness over most of Blizzard's body was completely gone. Her fur was now beginning to grow back in beautifully. What a great relief this was after 4.5 years of treatments for false allergies.

By Mid-October, Blizzard was getting better and starting to act like a happy dog again. By mid to late November, the constant biting, chewing, and scratching had subsided. Blizzard gained weight and was 75 lbs. She ran and played like the beautiful dog she used to be.

By December, she looked and acted like a very healthy dog again. Hopefully, she will never need to go to the vet again for any kind of illness. I am so glad that we did not put Blizzard down as had been advised to do by our Veterinary Dermatologist.

Elizabeth & Blizzard
Santa Ana, CA.

N'zymes
5-Step Healthy-Skin Program

NZYMES.COM - A Div. of Biopet Inc. • 8298 Arville St. Suite 103 • Las Vegas, NV 89139
Ph: 702.228.0097 • Toll Free: 877.816.6500 • Email: info@nzymes.com
Almost 20 years ago, we received a call from a woman who was facing a life-and-death decision for her white German Shepherd, Blizzard. She was told, after many allergy panels, that her dog Blizzard was allergic to ALL meats and had dozens of other food plus environmental sensitivities.

At This Point Blizzard’s Symptoms were Truly Overwhelming

- Dozens of identified “allergies”
- Rashes and blackened skin
- Ear and eye infections
- Sensitivities to light and sounds
- Severe itching and scratching
- Oozing sores and wounds
- Joint and muscle pain
- Lethargy

After 4.5 years of “allergies treatments”, including; allergy medications, antibiotics, steroids and special diet foods, the dermatologist/allergy specialist informed the owner that there was NO further hope for Blizzard’s condition, and the best thing to do would be to put her to sleep to end her suffering at 7 years of age.

We Worked with 3 Top People to Develop the Healthy Skin Program!

- K9 Nutritionist, Linda Arndt; aka “The Great Dane Lady”
- Veterinarian, Dr. Neil Weiner DVM, of Pet Care Naturally, Redding CA.
- Chemist, Rosco Campbell, of Rumble LLC; Stillwater, OK.

We still average dozens of NEW cases every day, but these same basic 5-Steps have helped thousands of pets with their recovery. We only ask that you follow this outline and call if you are unsure or are experiencing difficulties with the detox and cleansing process.

BACKED WITH A 120-DAY MONEY BACK GUARANTEE!

Blizzard cleared ALL of her symptoms and she made a remarkable recovery in just 3 ½ months. She went through a second cleansing when the summer heat arrived that lasted for about 2 months. Afterwards, she continued with no further symptoms.

3 Economical Kits to Choose From

Healthy-Skin Kit Mini
Recommended for Daily Use with "Small Pets and Companion Pets".
Includes: 1 LB. Granules

Healthy-Skin Kit Small
Recommended for Daily Use with "Small Pets and Companion Pets".
Includes: 3 Antioxidant Treats

Healthy-Skin Kit Large
Recommended for Daily Use with "Large Pets/Multi-Pet Families".
Includes: 2 LB. Granules

The NZYMES® Antioxidant Treats or Sprouted Granules add a "live" SUPERFOOD PROTEIN food source for your pet’s diet. They naturally aid the body and allow more efficient use of nutrients from pet food, promoting healthy skin and coat. They also help to cleanse toxins, ease tissue and joint discomfort and promote a healthier digestive balance and immune functions.

EACH KIT ALSO INCLUDES ONE OF THESE PRODUCTS

Ox-E-Drops Concentrate 2.2 oz.
Ox-E Topical Spray Solution 4 oz.
Ox-E-Drops is used Internally & mixed with food & water to help promote a pH balanced digestive tract. It also mixes with water to make our Topical Spray Solution to be applied 3-4 times daily to all the affected body areas.
Added daily to meals and water.
Applied topically 3-4 times daily.

2.2 Oz. Bottle of Tincture of BlackLeaf
BlackLeaf is added twice daily to the pet’s food. It adds an extra level in the battle against the yeast overgrowth & is naturally anti-parasitic. Overall, BlackLeaf’s properties enhance and help to speed up the cleansing & recovery.
Added daily to meals at week 2 and also used topically.

BacPak Small & Mini Kits = 100gm
Large Kit = 200gm
BacPak Plus is a powerful blend of probiotics & digestive enzymes and is key in the effort to rebuild natural flora of the Gut. It assists digestion, nutrient uptake & cleansing of the yeast toxins, where the yeast overgrowth resides.
Added daily to meals at the beginning of week 4.
**Step #1**

Get Diet-Usage Amounts From Usage Calculator - Not Bottles!

During the “Healthy-Skin Program”, the amounts shown in the Usage Calculator are meant to replace the regular daily usage amounts shown the NZYMES® Bottles Labels!

Select the “Usage Calculator” from within the “Pet Help” section in top menu under Programs | Tools as shown here to the right.

NOTE: To get the best and quickest results, we recommend adding the products as instructed in the ‘Usage Calculator’ to your pet’s meal twice daily. If you absolutely cannot feed your pet twice daily, please add the full daily usage amounts to the meal once per day.

---

**Healthy Skin Kit Usage Calculators**

Click an Image or Link Below to Choose the Calculator for Your Kit

1. **Choose the Kit You Want to Use!**

2. Next, Enter the Number for the Pet’s Weight Here!

   Enter Pet’s Weight (Numbers Only)

   Usage Amounts (Shown Below) are Based on the Pet’s Weight. You entered your pets weight as 45 pounds.

   - **Sprouted Granules – Starts Week 1**
     - 1/4 Tsp. in Meal Twice Daily
   - **Sprouted Granules – Starting Week 2**
     - 1/2 Tsp. in Meal Twice Daily
   - **OxÉ-Drops – Starts Week 1**
     - 3 Drops in Meal Twice Daily
     - “Dilute” the OxÉ-Drops by adding them to a tsp. or tbsp. of water and then pour onto the pet’s meal.
     - Add the same amount of OxÉ-Drops to the pet’s water dish each time it is filled.
   - **Blackleaf – Starts Week 2**
     - 9 Drops in Meal Twice Daily
     - Add the Blackleaf drops twice daily to the pet’s meals
   - **BacPak Plus – Starts Week 4**
     - 1/3 Scoop in Meal Daily
     - Add to the the first meal of the Day
     - *Daily amount may be split into 2 meals, if preferred.

3. Print the Daily Usage Directions
Step #2
Feed the Correct Foods and Treats

Yeast Thrives on Sugar – Don’t Feed the Problem!
In order to see the results you are looking for, it’s important to avoid sugar sources in your pet’s food and treats. Anything the body recognizes as sugar or converts to sugar, slows the progress of recovery.

Know Your Ingredients!
Find the Ingredients Panel on the side or bottom of your pet food bag or can. Look at the first 7 to 8 ingredients listed in your pet’s food and if they are shown below then it’s time to consider making a change to a better quality pet food.

**Change Your Foods If These Ingredients Are Found in the First 8 Listed**
- Wheat Flour or Gluten
- Corn Meal or Gluten
- White Rice
- Brewer’s Rice
- Millet
- Tapioca
- Potato
- Sweet Potato
- Carrots
- Molasses

Choose a Quality Pet Food From Our Recommended List
https://www.nzymes.com/pet-nutrition/pet-foods-recommended-nzymes/

Use the store finder for locations where you can buy pet foods locally. If you’re unable to find a local store, try online with sites like www.amazon.com, www.petflow.com or www.jet.com for pet food. Shipping pricing is often LOW COST or NO COST!

Changing Pet Foods
Transition your pet to the new food by mixing the old and new food together as shown below over 1 week period.
(2 Days = 75% Old Food / 25% New Food)
(2 Days = 50% Old Food / 50% New Food)
(2 Days = 25% Old Food / 75% New Food)

TIP: Add Coconut Oil to Food
Coconut oil is very beneficial and quite helpful during the detoxing process. Soften and dribble over the pet’s food.

For Each Feeding:
Add a 1/4 tsp. for pets 10 lbs and under.
Add a 1/2 tsp. for pets 10-60 lbs.
Add (1) tsp. for pets between 60-150 lbs.
Step #3
Bathing Your Pet

**OUR 1ST CHOICE**
**NZYMES® HEALTHY SKIN SHAMPOO**
NATURAL ENZYMATIC SHAMPOO FOR PETS

When you need a pet shampoo for serious skin problems, you want a product that is safe and powerful and really works! You need a formula that can penetrate effectively and help speed the natural recovery process for the pet.

NZYMES® is a family nutrition business with 20 years of success in helping pets of all ages faced with these skin & coat symptoms.

Our NZYMES® Healthy Skin Program has achieved thousands of successful results with pets of all ages, but these skin & coat symptoms require regular cleanings, and we needed to develop our own shampoo for the skin program; a shampoo that really helps, and is guaranteed to work!

Our new NZYMES® Healthy Skin Shampoo was designed to be effective for the worst skin problems, yet gentle enough to be used daily. The shampoo can also be applied topically on the pet’s itchy areas for some additional relief as needed.

The powerful natural ingredients are specially formulated with vitamins and moisturizers to promote recovery for a pet’s skin and coat. This unique shampoo was designed especially to offer soothing relief for pets that are suffering with dry, itchy and flaky skin.

Click Photo to See our Example of Romeo
We’d like your feedback.

It is important to keep the pet’s body clean from the flaky and decaying skin cells as the toxins continue to exit the body. Remember; bathe the pet at least 2 times a week.

**DIRECTIONS:** Pre-Wet the pet’s full coat. It also helps to do a short pre-wash (and a full rinse) using a simple baby shampoo. The pre-wash will allow the shampoo to suds-up for greater effectiveness. Next, apply a small amount of the Healthy Skin Shampoo along the pet’s topline and massage the suds into the pet’s skin & coat and allow to soak for 4 to 5 minutes. Rinse and repeat as needed. **NOTE:** The Healthy Skin Shampoo is concentrated but not a thick liquid. To avoid waste, make sure to use caution when dispensing.

Alternate Shampoos and Instructions

When using the shampoo products below, we suggest to bathe the pet at least 2 times per week while going through the detoxifying & cleansing process. At the end of the wash, use **DO A FINAL RINSE USING BAKING SODA & WATER.**

(***Note:** Mix 2 teaspoons of baking soda per each 1 gal. water & rinse the pet)

Before we had our own shampoo, we learned which products worked best for the shortest recovery period. We suggest using one from the list below during the full term of the Healthy Skin Program, as they have worked successfully with thousands of cases.

- **Reliq Shampoo**
  Use: Green Tea, Lavender or Rosemary

- **Keys Soap**
  Use: MetaClean Shampoo

- **Micro-Tek Shampoo**
  Use: Medicated Pet Shampoo
  [www.eqyss.com](http://www.eqyss.com)

- **DERMagic Skin Essentials**
  Use: Skin Rescue Shampoo Bar, Skin Rescue Lotion & Hot Spot Salve.
  [https://www.dermagic.com](https://www.dermagic.com)

  **NOTE:**
  Print Instructions from their Info Menu
  Using Dermagic with NZYMES®

  **DO NOT USE THE BAKING SODA RINSE WITH THE DER MAGIC PRODUCTS.**

- **U.S. Veterinary Shampoos**
  **Malaseb Shampoo**
  Search: Malaseb Veterinary Shampoo
  [Vetoquinol](https://www.vetoquinolusa.com/)

  **Universal Medicated Shampoo**
  [https://www.vetoquinol.ca/](https://www.vetoquinol.ca/)

- **Canadian Veterinary Shampoos**
  **Vetoquinol.CA**
  Use: Canadian Medicated Shampoo
  [https://www.vetoquinol.ca/](https://www.vetoquinol.ca/)
Step #4
Using Ox-E Topical Spray Solution

1) Use Our Ready-Made Ox-E Topical Spray Solution or...
2) Make Your Own Using Ox-E-Drops and Distilled Water.
   (Make more when empty; Mix 40 drops of NZYMES® Ox-E Drops with 4 Oz. of Distilled Water)

Use the handy spray bottle to apply a light coat of Ox-E Topical Spray Solution 3 to 4 times daily on all the problem skin areas. We suggest to USE THE OX-E TOPICAL “COLD” to help ease the hot skin, inflammation, itchiness, and problem flare-ups as you work your way through the cleansing period.

For those pets that dislike being sprayed, we suggest soaking a Cotton Ball or Cotton Pad with the cold solution (see below) and apply directly to help soothe those areas of the skin that are hot and inflamed. Over time this will support healthier skin and faster recovery.

IMPORTANT: WARM THE OX-E TOPICAL SOLUTION BEFORE USING INSIDE EAR CANAL
NOT USING THE OX-E TOPICAL EVERY DAY MAY LEAD TO A LONGER RECOVERY PERIOD.
APPLY THE OX-E TOPICAL SPRAY SOLUTION AT LEAST 3-4 TIMES PER DAY ON ALL PROBLEM AREAS!

Directions: Apply the Ox-E Topical Spray Solution as shown in the instructions below.

For the Pet’s Skin
3-4 times per day apply a light coat of Ox-E Topical Spray Solution on all of the affected or problem areas of the skin. You may also apply by soaking a cotton-ball or cotton-pad and applying it. Continue this process until the area has recovered.

For the Pet’s Ears
3-4 times per day saturate a cotton ball with room temperature Ox-E Topical Solution & squeeze the drops from the cotton ball into the ear canal. Work the solution around from the bottom V of the Ear with index finger and thumb, then wipe out the ear inside and out.

For the Pet’s Eyes
3-4 times per day saturate a cotton ball with the Ox-E Topical Solution and wipe the eye and clean away any residue. Use a separate cotton ball for each eye until the eyes have recovered.

USING OX-E TOPICAL COLD
1) Store the Ox-E Topical solution in the Refrigerator and apply it COLD!
   - Avoid using the solution COLD inside the pet’s ear canal.
2) Pour some OX-E Topical Solution into a small bowl with a couple of ice cubes and soak a cotton ball or cotton pad to apply around eyes, skin and feet.
Step #5  
Prevent Damage to Skin, Ears and Eyes  

DO NOT ALLOW your pet to continue to create damage to his skin by chewing or scratching and rubbing the body. Stop him as soon as it starts happening and then soothe the areas with a cold compress. These suggestions will help your pet stay comfortable and avoid more damage to the skin.

SUGGESTIONS TO HELP PREVENT FURTHER SKIN EAR & EYE DAMAGE

T-Shirts • Onesies • Body Covers • Socks • Leg Wraps •

USE A SOFT COLLAR TO PREVENT SKIN, FACE, EAR AND NECK DAMAGE

Prevent the pet from doing damage to face, eyes and especially the ears. Pets who shake their head and constantly scratch their ears can do very serious damage which leaves the ears swollen, painful with an Aural Hematoma that may require surgery to reduce swelling and then stitches to put the ear flap together again.

We prefer the use of a SOFT COLLAR rather than the hard plastic-cones as they are much less stressful for the pet. There are a number of new soft collar products available, but we have had good experience with the following companies.

<table>
<thead>
<tr>
<th>Product</th>
<th>Website</th>

</tr>
</tbody>
</table>

Protective collars can also help prevent damage to the feet, legs as well as the rest of the body, which is very common in these cases. It may take some time for your pet to get used to wearing a collar, but it is more important to prevent further damage to the skin.
Help with the Itching!
Control the Biting, Chewing, Licking and Scratching

One of the most difficult issues to manage with this condition is the pet’s constant desire to scratch the itchy areas where the toxins are being released. Notice that these areas are usually **HOT and INFLAMED**, so applying cold compresses or giving a cooling bath, when needed, to help reduce the skin inflammation and itchiness is very helpful. Even if you are nearby and can get your dog into the ocean if nearby to give relief would make most sense. **NOTE**: *Store the Ox-E Topical in the refrigerator and apply cold.*

**COLD COMPRESSES / COLD TOWELS / COOLING EPSON SALTS BATHS**

**Cold Compresses and Cooling Baths** are the easiest way to give a pet relief from the itchiness. We suggest to use Cold packs, cold wash cloths or even a cold towel to soothe the problem areas and ease the redness and inflammation over the body. Another option is to add some **Ox-E Topical Solution** in a **bowl with Ice** and soak a small cloth and apply cold on the affected area until the itch is soothed. If you live near the ocean, we suggest to let the pet get into the sea water, as it is very soothing and relieving.

**USE LISTERINE MOUTHWASH (GOLD ONLY)**

Using **GOLD LISTERINE** in a spray bottle, spray the hot spots or inflamed areas to help relieve the itching. If your pet has open sores, as full-strength it will sting on open wounds. Another option is to **dilute the Listerine 50/50 with cool water and use as a cooling rinse** . Best to use in late evening to help pets rest through the night.

**USING BAKING SODA AND WATER**

This is a well known remedy that helps to ease itching. Mix 1 full teaspoon of baking soda with 8 ounces of water and **APPLY IT COLD WITH A SPRAY BOTTLE**. Baking soda can also be mixed with a small amount of water to make a thin paste for the more severe areas.

**USING ORGANIC COCONUT OIL TOPICALLY**

Apply coconut oil to affected areas and rub in thoroughly. Coconut oil is naturally anti-fungal.

**Local**: 702.228.0097
FOLLOW THIS PROGRAM FOR AT LEAST 1 FULL YEAR!
Allow the time needed for the pet to achieve a more complete digestive balance.
For nearly 20 years, we have successfully helped resolve these digestive breakdown issues with our customer’s pets using natural feeding and cleansing practices. Even though many will see the symptoms subside within a few months, continuing to use the Healthy Skin-Kit Products as instructed will help finalize the cleanse and help re-balance the gastrointestinal tract.

EXPECT THE SYMPTOMS TO WORSEN BEFORE THEY GET BETTER
The NZYMES® Healthy Skin Program is designed to help clear the pet’s body of an internal digestive yeast overgrowth. Remember the body MUST go through a detoxification process. The cleanse will come in phases and the symptoms will look much worse as the toxins are pushed out of the body during the initial cleansing phase (2-3 months). This is a good thing as it is evidence that the program is working.

CHLOE’S STORY IS A GOOD EXAMPLE - “My dog Chloe was being seen by my family vet for years. She was diagnosed with ‘Allergies’ about a year ago. The doctor did the classic thing and prescribed her allergy medicines. When asked what kind of allergies, the doctor did not have an answer. After 6 months of ‘allergy medicine’, at $100.00 for 30 pills, my dog was living in her own misery. I felt like a horrible dog owner. I was determined to find a solution. After the research and all the positive things I have heard about Nzymes, I decided to try them as my dog was miserable all day. Itching, digging until she was ripping her skin open. After 3 weeks, I was convinced I made the right choice. We are still following the program’s guidelines. Nzymes has given me my loving dog back. She is happy and itch free. The only thing I have done was used Nzymes and NO ALLERGY medicines. Thank You, you are awesome!”
Mike Toro and Chloe, SC.

THIS PROGRAM TAKES TIME.
Depending on the severity of the condition and the medications the pet was on prior to starting this program, the FULL CLEANSE GENERALLY TAKES 3-7 MONTHS. But some cases with older pets on long-term medications or puppies with early digestive tract damage can take as long as a year to reach full recovery.

Work with Your Vet to Avoid Further Vaccinations (Until Full Recovery has Occured)
Ask if the Vet will Allow a TITER BLOOD TEST to Verify the Current Rabies Status.

NOTE: Over-vaccination can stimulate a reverse immune response and flare the old symptoms again.

HAVE THE THYROID CHECKED
Sometimes there are secondary medical issues like Low Thyroid disease that are combined with the pet’s yeast overgrowth. We always suggest having a proper thyroid blood panel done to determine the pets thyroid levels as well. Pets with both conditions tend to cycle up and down, getting a little worse then getting a little better. These pets generally show these basic symptoms; Lethargy, Dull & Brittle Coat and Symmetrical Hair-loss.

What to Know, What to Expect
Prevent Damage to Skin, Ears and Eyes

June 17th
July 9th
July 21st
Sept 11th
1. "I’m Confused, Is This Allergies or Yeast?"
Most people dealing with itchy symptoms involving a pet’s skin, ears, eyes, and feet or legs have been led to believe their pet has FOOD ALLERGIES. Veterinary education rarely touches on digestive disorders. As a result, most professionals have little knowledge or experience with the common symptoms of Leaky-Gut Syndrome and its role with Candida Yeast Problems in Pets.

2. "Should I Have My Pet Tested for Allergies?"
Allergy diagnostics of a pet with this condition will often produce a long list of FALSE POSITIVE results, thus making it look like the pet has sensitivities to many things, when it actually doesn’t. This is because the pet’s immune system is compromised, and acting in a hyper-sensitive mode. The symptoms of a “Yeast Overgrowth” in pets are obvious and diverse.

3. "What About Medications and Special Diets?"
Veterinary protocols suggest that Antibiotics, Steroids, Allergy shots and Special Foods as "The Solutions". However, the medications and high-starch foods can actually allow the ‘Candida yeast overgrowth’ to expand and worsen.

4. "How Long Do the Healthy Skin Kits Last?"
Items in the kit will last for differing lengths of time, depending on the size of the pet. All Nzymes products are also sold separately so that you can replace the items as you need them.

   Example: Large Kit for a 70-pound dog lasts approx...
   2 lb Granules: 5-6 months ~ BacPak Plus: 1 year
   OX-E-Drops: 2-3 months ~ Black Leaf: 2-3 months

5. "How Long Does It Take to Start Seeing Results?"
Each case is unique. The initial detoxification (or cleansing period) generally takes 2-3 months. After the first detoxification period, you can expect to see this condition progressively improve over the next 2-4 months as the natural flora in the digestive tract is re-established. It is recommended to continue using the products (for at least 1 year) to maintain this healthy flora as it grows stronger. Please note that each case is different and recovery time may be shorter or longer depending on multiple factors like medications, thyroid condition, medical history, severity of infection, etc.

6. "Why Does It Take So Long to Recover?"
Quite simply, your pet did not develop this overnight. It takes months or years to develop in most cases. Likewise, it can take many months to reverse the trend and re-establish a healthy GI tract.

7. "What Should I Expect to Happen as They Go Through the Cleansing Process?"
The Nzymes Healthy Skin Program is a detoxification program. As the yeast dies off, it will be carried to the extremities to be flushed out. Since you are ACTIVELY killing yeast cells with this process, you will be accelerating the rate at which they are exiting through your pet’s skin, etc. This is why we tell you to prepare for your pet to look worse before he gets better.

It is very important that you keep your pet on this program for at least one full year. Even though many will see the symptoms subside within a few months, continuing to use the products as instructed will help push the body through the cleansing phases and re-balance the gastrointestinal tract.

9. "Do I Have to Change the Pet Food?"
Yes! Many pet foods contain a high amount of carbohydrates, with a high glycemic index. The higher the glycemic index, the more quickly those carbohydrates convert to sugar, and sugar FEEDS the yeast. You do not want to feed the problem while you are trying to fight it off. Choosing from one of our recommended foods will ensure that you do not impede your progress.

10. "Why Do I have to Use All of These Products?"
Each item in the kit is doing a specific job to get your pet through the process of detoxification and to help restore the natural GI balance. All of these products work in the pet’s body separately, yet together, to help resolve the skin problems from the inside out.

Yeast is a tough customer and doesn’t give up easily. It is not unusual for a pet to experience a reversal several months after improving. This is one reason it is SO CRITICAL to remain vigilant after your pet’s major symptoms have cleared. If your pet’s condition should degrade, we recommend going back to the initial dosing (doubling the Granules and the Black Leaf Tincture) and frequent bathing. This generally helps to get things under control in a few weeks.

12. "Can These Products Be Taken With Medications?"
The Nzymes products will not cause adverse reactions with other medications, however, those who are able to refrain from using medications during the detoxification process will achieve the best results with the pet skin problems.

13. "Why Did My Pet Get Diarrhea After Starting the Healthy Skin Program?"
Digestive upset is rare but can happen. This is a detox program and sometimes it will cause flu-like symptoms during the cleanse. If your pet has diarrhea on this program, it is usually short lived not lasting more than 2-3 days. It is important that the pet stay well hydrated.
